`[Breakout]  [Pullback]  [Support / Resistance]  [Invalidation]  [Expected Dur`

`▸ Market Mood · 🟠🟠🟠🟠⚫ 4/5 — Elevated`

What Market Mood means right now:
The broader market is moving fast. Bigger swings either side are more likely than usual. Trades that worked in calm conditions are more likely to be stopped out before reaching their target.

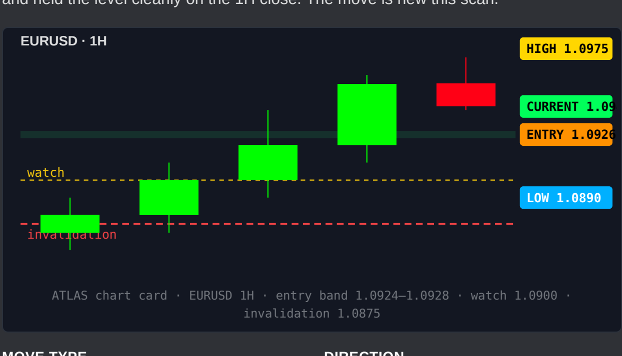
What this means for your trading today (dollars-first):
🟢 Position size — If your normal risk per trade is $500 on a $10,000 account, reduce to ~$300 (60% of normal) for the next 6 hours. On a $25,000 account, reduce from $1,250 to ~$750. Why: bigger market swings mean wider exit-points are needed, which means more $$$ at risk per setup.
🟡 Exit-points — give the trade more room. A tight exit-point is more likely to be hit before the move confirms direction. Concrete: instead of 30-point exit on EURUSD, use 40-50.
🟠 Marginal setups — skip them. Only act on candidates where the trigger level is broken AND the next candle closes beyond it (the **confirmed directional structure** check, see below for example).
🔴 Do NOT chase already-extended moves. Example: NVDA at $940 after a $20 push from $920 is NOT a fresh entry. Wait for price to come back to a structural test (the floor that was the ceiling) — see the NVDA card below.

```
║  ⭐  STANDOUTS — TODAY'S STRONGEST MOVERS  ║
```

FRESH · STANDOUT #1 of 3 · EURUSD just appeared on this scan

🐎 EURUSD · STRONG BULLISH

Price pushed above 1.0950 — a level that had capped EURUSD for the last 3 weeks — and held the level cleanly on the 1H close. The move is new this scan.



MOVE TYPE
Breakout · early stage

DIRECTION
[Long ▲] — expecting price to keep moving up

CONVICTION
🟢🟢🟢🟢⚫ 4/5 — High
Why High: trigger level broke + momentum increased + retest held + the broken level is now defended by buyers (all 4 criteria met).

TRIGGER LEVEL
[Trigger Level]: **1.0950**
Why it matters: 1.0950 capped every push for 3 weeks.
It has flipped from ceiling into floor — price now treats it as Support.

EXPECTED DURATION
[Expected Duration]: Swing — days, not minutes

TODAY'S RANK
[Cycle Rank]: 1st of today's 3 standouts

WHERE TO ACT
🟢 ENTRY zone 1.0924 – 1.0928
What this means: price has pulled back into the tight band where buyers stepped in the last time the level was tested.
Required price behaviour: a 5-minute candle that opens inside the band AND closes above the band low (this is the confirmed directional structure test).
Action: BUY on that candle close — start with HALF your normal dollar exposure for this card. Concrete: if the standard plan on this card is ~$300 of dollar risk, begin with HALF dollar exposure = **~$150 of risk.**

🟡 WATCH level 1.0900
What this means: buyers are losing initial control. The first warning sign that the move is weakening.
💲 If price closes below 1.0900 on the 1H, the half-size position is typically down 30–50% of planned risk (~$60 of the ~$150 at risk).
Action: hold what you have, do NOT add more.

🟠 CAUTION zone 1.0900 – 1.0880
What this means: the other side is in control inside this band. Holding from here means fighting the structure — exit risk is now real, not theoretical.
💲 Position drawdown 50–80% of planned risk (~$98 of the ~$150).
Action: scratch the trade for a small loss now. Re-read at next scan.

🔴 [Invalidation] 1.0875
What this means: the bullish idea is OFF entirely.
💲 Full planned risk taken: $150 on HALF dollar exposure ($50k notional EURUSD).
Action: exit ALL remaining size NOW. Do NOT re-enter — wait for a fresh structure on a later scan.

🔵 Next review 12:15 UTC

ATLAS re-reads every zone at the next scan.

💲 DOLLAR RISK THIS TRADE — HALF SIZE FOR FRESH
💲 Standard plan: $300 risk at $100k EURUSD notional exposure (entry 1.0925, exit 1.0895, 30-point distance).

💲 Recommended start (HALF dollar exposure on a FRESH candidate): ~$150 risk at $50k EURUSD notional exposure.

💲 If Market Mood drops to Calm (1/5) you can scale dollar exposure back up to the full $300 plan after a clean re-read.

💲 Reward target if EURUSD reaches 1.1010 first: ~$255 on the HALF-exposure entry · 5.7R.

WHAT THIS MEANS
The path of least resistance is up while **1.0875 holds. Buying the dip into the tight green entry band is the trade ATLAS would take.**

WHAT TO DO NOW
① Wait for a 5-min candle to open inside **1.0924 – 1.0928**.
② BUY that candle's close — HALF dollar exposure for FRESH (**~$150 of risk**).
③ Place the exit-point at **1.0895** (**~$150 risk**).
④ If **1.0900** closes below on 1H, exit half of remaining dollar exposure (freeing **~$75**) and hold the rest with the exit-point unchanged.
⑤ Full exit at **1.0875** if reached — the bullish idea is OFF.

WHAT CONFIRMS THE IDEA
A 5m close above **1.0928 after pulling back into the entry band — the confirmed directional structure test (price closes past the trigger AND the next candle holds beyond it).**

WHAT CANCELS THE IDEA
A 1H close below **1.0875. At that point the ceiling-to-floor flip has failed and the move is invalidated.**

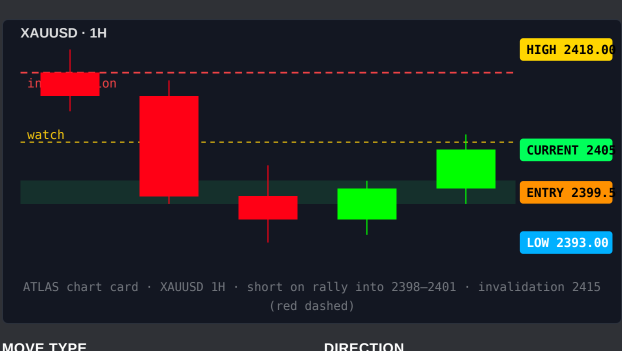
ATLAS · Dark Horse · standout 1 of 3 · first detected at this scan (Tuesday 13 May · 12:00 UTC)

ATLAS · Dark Horse Radar

STILL ACTIVE · STANDOUT #2 of 3 · XAUUSD (2h 30m)

🐎 XAUUSD · STILL TRENDING

Gold broke below 2398 on the 1H close 2 cycles ago. Sellers are still in control and the broken level has held as a ceiling on every bounce since.



MOVE TYPE
Breakdown · mid stage

DIRECTION
[Short ▼] — expecting price to keep moving down

CONVICTION
🔴🔴🔴🔴⚫ 4/5 — High
Why High: trigger level broke + sellers defended every retest across 2 cycles + momentum holding (3 of 4 criteria met).

TRIGGER LEVEL
[Trigger Level]: **2398**
Why it matters: 2398 was the floor that held for 4 weeks.
It broke 2 cycles ago — now flipped into a ceiling. Sellers defend every bounce.

EXPECTED DURATION
[Expected Duration]: Swing — days, not minutes

TODAY'S RANK
[Cycle Rank]: 2nd of today's 3 standouts

WHERE TO ACT
🟢 ENTRY zone 2398 – 2401
What this means: price has pulled back into the tight band where sellers stepped in the last time the level was tested.
Required price behaviour: a 5-minute candle that opens inside the band AND closes below the band high (this is the confirmed directional structure test).
Action: SELL on that candle close — start with HALF your normal dollar exposure for this card. Concrete: if the standard plan on this card is ~$1,350 of dollar risk, begin with HALF dollar exposure = **~$675 of risk.**

🟡 WATCH level 2406
What this means: sellers are losing initial control. The first warning sign that the move is weakening.
💲 If price closes above 2406 on the 1H, the half-size position is typically down 30–50% of planned risk (~$270 of the ~$675 at risk).
Action: hold what you have, do NOT add more.

🟠 CAUTION zone 2406 – 2412
What this means: the other side is in control inside this band. Holding from here means fighting the structure — exit risk is now real, not theoretical.
💲 Position drawdown 50–80% of planned risk (~$439 of the ~$675).
Action: scratch the trade for a small loss now. Re-read at next scan.

🔴 [Invalidation] 2415
What this means: the bearish idea is OFF entirely.
💲 Full planned risk taken: $675 on HALF dollar exposure (50 oz XAUUSD).
Action: exit ALL remaining size NOW. Do NOT re-enter — wait for a fresh structure on a later scan.

🔵 Next review 12:15 UTC

ATLAS re-reads every zone at the next scan.

💲 DOLLAR RISK THIS TRADE — FULL SIZE ALLOWED (STILL ACTIVE)
💲 Standard plan: $1,350 risk at standard XAUUSD exposure (entry 2401, exit 2415, $13.50/oz × 100 oz).

💲 STILL ACTIVE candidates have proven structure across 2+ cycles, so full dollar exposure is acceptable — but Market Mood ELEVATED reduces dollar exposure to ≈ $945 risk.

💲 Reward target if XAUUSD reaches 2360 first: ~$2,870 on the reduced-exposure entry · 3.0R.

WHAT THIS MEANS
The path of least resistance is down while **2415 holds. Selling rallies into the tight green entry band is the trade.**

WHAT TO DO NOW
① Wait for price to rally into **2398 – 2401**.
② Look for the candle to stall (small range body, no close above 2401).
③ SELL that stall — Market Mood ELEVATED reduces dollar exposure to **~$945 risk**.
④ Place the exit-point at **2415** (**~$945 risk**).
⑤ If **2406** closes above on 1H, exit half of remaining dollar exposure (freeing **~$470**).

WHAT CONFIRMS THE IDEA
A 5m close below **2398 after rallying into the entry band, with the next candle holding below.**

WHAT CANCELS THE IDEA
A 1H close above **2415. At that point the broken floor has been reclaimed and the bearish idea is OFF.**

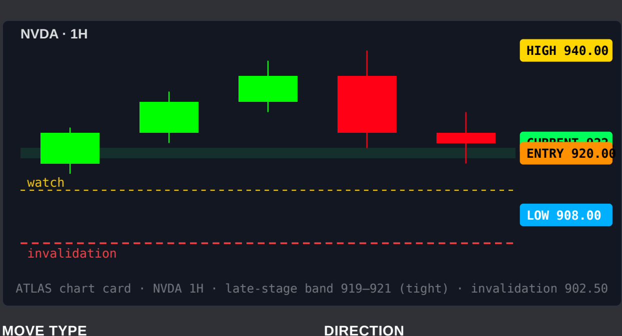
ATLAS · Dark Horse · standout 2 of 3 · first detected 11:30 UTC · still trending in cycle 2 of 3

ATLAS · Dark Horse Radar

FADING · STANDOUT #3 of 3 · NVDA — older mover, late-stage caution

🐎 NVDA · DEVELOPING WATCH

NVIDIA's uptrend has been running for 4 cycles. Each new high is smaller than the last. The move is mature — wait for a structural test, do not chase from $940.



MOVE TYPE
Continuation · late stage

DIRECTION
[Long ▲] — but reward is shrinking

CONVICTION
🟠🟠🟠⚫⚫ 3/5 — Reduced
Why Reduced: trigger level still valid + buyers still defending — BUT each new high is smaller than the last, and the move is now 4 cycles old (2 of 4 criteria met, 2 weakening).

TRIGGER LEVEL
[Trigger Level]: **925.40**
Why it matters: 925.40 is the structural level the uptrend rotates around.
Still valid — but each push above it is smaller than the last. Reward is fading.

EXPECTED DURATION
[Expected Duration]: Intraday — hours, not days

TODAY'S RANK
[Cycle Rank]: 3rd of today's 3 standouts

WHERE TO ACT
🟢 ENTRY zone 919.00 – 921.00
What this means: price has pulled back into the tight band where buyers stepped in the last time the level was tested.
Required price behaviour: a 5-minute candle that opens inside the band AND closes above the band low (this is the confirmed directional structure test).
Action: BUY on that candle close — quarter-size dollar exposure only because this card is FADING. Concrete: if the standard plan on this card is ~$1,860 of dollar risk, begin with QUARTER exposure = **~$465 of risk.**

🟡 WATCH level 912.80
What this means: buyers are losing initial control. The first warning sign that the move is weakening.
💲 If price closes below 912.80 on the 1H, the half-size position is typically down 30–50% of planned risk (~$372 of the ~$930 at risk).
Action: hold what you have, do NOT add more.

🟠 CAUTION zone 912.80 – 906.00
What this means: the other side is in control inside this band. Holding from here means fighting the structure — exit risk is now real, not theoretical.
💲 Position drawdown 50–80% of planned risk (~$605 of the ~$930).
Action: scratch the trade for a small loss now. Re-read at next scan.

🔴 [Invalidation] 902.50
What this means: the bullish idea is OFF entirely.
💲 Full planned risk taken: $465 on QUARTER dollar exposure (25 shares NVDA).
Action: exit ALL remaining size NOW. Do NOT re-enter — wait for a fresh structure on a later scan.

🔵 Next review 12:15 UTC

ATLAS re-reads every zone at the next scan.

💲 DOLLAR RISK THIS TRADE — QUARTER SIZE ONLY (FADING)
💲 Standard plan: $1,860 risk at 100 shares NVDA notional exposure (entry $920, exit $902.50, $18.60/share × 100).

💲 FADING candidates: QUARTER dollar exposure at most — 25 shares NVDA at ~$465 risk.

💲 Reward target if NVDA reaches $945 first: ~$600 on the QUARTER-exposure entry · 1.3R.

⚠️ Reward-to-risk is below 2R — only take this if no other cards are available.

WHAT THIS MEANS
The trend still exists, but the easy reward has already been earned. Late buyers get stopped out the most often.

WHAT TO DO NOW
① QUARTER dollar exposure at most — this is not a primary entry. **~$465 risk** ceiling.
② Only buy a clean pullback into **919 – 921** that prints a strong defensive 5-min close.
③ Place the exit-point at **902.50** (**~$465 risk**).
④ If **912.80** closes below on 1H, exit ALL — late-stage cards do not give second chances.
⑤ Skip this card entirely if the FRESH or STILL ACTIVE standouts above offer a cleaner setup today.

WHAT CONFIRMS THE IDEA
A 5m close above **921 after pulling back, with strong defensive volume on the bounce.**

WHAT CANCELS THE IDEA
A 1H close below **912.80 OR any close below 902.50. The mature uptrend has rolled over.**

⚠️ LATE-STAGE CAVEAT
Size **quarter — the move is late. The reward is small. Skip if better setups exist.**

BUILDING · CHART REFERENCE

```
║  📡  BUILDING — WARMING UP BELOW STANDOUT GRADE║
```

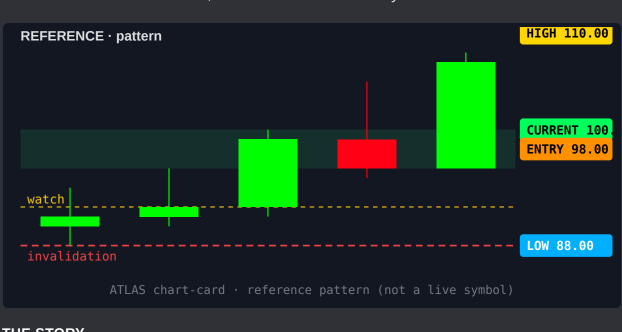
`Pre-Radar]  Pullback]  Resistance]  Support]`

Two markets are close to the standout bar but not there yet.
GBPUSD needs a 1H close above 1.2600 to qualify.
EURJPY needs momentum to expand on its next push (currently flat).
If either firms up by the next scan, they'll graduate into a standout.

```
║  📚  CHART REFERENCE — HOW TO READ THE FOUR ZONES║
```

📚 Clean Bullish Breakout — Reference

Every Dark Horse candidate above is the same pattern in different markets. This is what it looks like on the chart, and what a trader actually does at each zone.



THE STORY
Price pushed through a level that had capped it for weeks (the old high). It came back to test the same level. Buyers stepped in to defend it. The ceiling has flipped into a floor.

HOW A TRADER ACTS (CONCRETE, DOLLARS-FIRST)
🟢 **BUY the pullback into the green ENTRY band — ONLY if the next 5-min candle opens inside the band AND closes above the band low.**

🔴 Place the exit-point just below the **dashed red INVALIDATION line**. If price closes below it on the 1H, exit immediately.
💲 Dollar risk = (entry price − exit price) × position size × $/point. Size the trade so this number ≤ 1% of your account ($100 on $10k, $250 on $25k, $1,000 on $100k).

RENDERED ATLAS CHART CARDS
The four zones above (ENTRY → WATCH → CAUTION → INVALIDATION) annotate the live ATLAS chart snapshot for this standout. Cross-check the current price against each zone before acting.

`▸ Risk reminder`

Every zone above is what ATLAS sees right now. Live price moves, the zones move with it. Cross-check the current price against the zone before acting. ATLAS reviews again at 12:15 UTC.

`▸ Briefing summary`

3 standouts today (1 FRESH, 1 STILL ACTIVE, 1 FADING). Market Mood 🟠🟠🟠🟠⚫ 4/5 — Elevated. Cut your normal $500/trade risk to ~$300.
The FRESH EURUSD card is the cleanest reward-to-risk: HALF dollar exposure = **~$150 risk**, target **~$255** at 1.1010 (5.7R).
The STILL ACTIVE XAUUSD short carries Market-Mood-reduced dollar exposure (**~$945 risk**) since structure has held across 2 cycles.
The FADING NVDA card is a quarter-size dollar-exposure scalp only (**~$465 risk**, 1.3R) — skip if better setups exist.
Next scan 12:15 UTC.
