MARKET MOOD · REGIME

WHY THIS MATTERS

USD inflation cycle dominates this window. Rate-path expectations sit at the core of every cross-asset price — yields and the dollar lead, gold and risk indices follow on transmission.

MARKET IMPACT · TRANSMISSION CHAIN

cause: USD inflation surprise vs forecast → expectation: rate-path repricing in the front end → market reaction: USD and yields move first → asset impact: US Dollar Index direction sets gold / US-index reaction.

CROSS-ASSET CONSEQUENCES

FX: US Dollar Index · USD pairs (EURUSD, GBPUSD, USDJPY, USDCAD) — direction historically tracks the USD rate-path repricing first.

Indices: US (NAS100, US500, US30) — rate-sensitivity favours the inverse of the yield reaction; risk-tone confirmation comes from VWAP hold / loss.

Commodities: Metals (XAUUSD) — historically inverse to USD / yields; rejection or reclaim of the pre-release high / low is the read.

OPERATOR GUIDANCE

Confirms: A confirmed candle close on 5M / 15M in surprise direction validates continuation. Cross-asset agreement required.

Cancels: Post-release impulse retraces fully within 30 min, lead pair and USD-sensitive risk disagree, or 1H closes back inside pre-release range.

HISTORICAL REACTION

📅 17

HISTORICAL REACTION CONTEXT · LAST 3

• **Apr 2026:** 3.5% **+0.2%** (above) → USD bid, gold offered

• **Mar 2026:** 3.0% **0** (in-line) → mixed

• **Feb 2026:** 3.4% **+0.1%** (above) → USD bid intraday

BRIEFING SUMMARY

T-1H alert · CPI (USD). Macro is dollar-yield-led; cross-asset consequences cascade through US Dollar Index on direction of surprise. Working bias conditional until price confirms through structure.
