MONDAY OPEN FOCUS

Three or more high-impact catalysts cluster early-week. Lead exposure: UK CPI (GBP) · CPI (USD) (USD) · ECB Rate Decision (EUR). Live confirmation required after market reopen.

Lead exposure: UK CPI (GBP) · CPI (USD) (USD) · ECB Rate Decision (EUR)

EVENT CLUSTERS · WEEKLY WINDOW

UK · GBP BLOCK · 2 EVENTS

HIGH

UK CPI · 01:00 AWST · 17:00 UTC · GBP

HIGH IMPACT

Inflation reading — rate-path lever for GBP and yields.

Forecast: 2.4% · Previous: 2.2%

Why this matters: Hotter-than-forecast readings historically tend to support GBP and yields (rates expected to stay higher for longer), pressuring gold and risk indices. Cooler readings favour the reverse rotation.

Market impact: cause: GBP inflation surprise vs forecast → expectation: rate-path repricing in the front end → market reaction: GBP and yields move first → asset impact: US Dollar Index (DXY) direction sets gold and US-index reaction

Before: Market is positioning around the 2.4% consensus; GBP pairs and yields are most sensitive.
During: First reaction may be a liquidity sweep. Above forecast supports GBP / yields; below forecast pressures both.
After: A 5M / 15M [Confirmed candle close] in surprise direction validates continuation. Reassess only after that close.

Confirms: US Dollar Index (DXY) / yields lead; a [Confirmed candle close] on 5M / 15M in surprise direction validates.

Cancels: First reaction reverses inside 30M; pre-release reference area lost; directional read cancelled.

HISTORICAL REACTION

BOE Rate Decision · 01:00 AWST · 17:00 UTC · GBP

HIGH IMPACT

Central-bank tone — hawkish/dovish vs current pricing.

Why this matters: Tone vs current market pricing is the lever. Hawkish lean supports GBP; dovish lean pressures it. Surprises against current pricing historically produce outsized moves.

Market impact: cause: tone vs current market pricing → expectation: rate-path lean shifts → market reaction: GBP repositions on tone, not headline → asset impact: cross-pair flow and rate-sensitive assets follow

Before: Market is pricing the existing rate-path; positioning is light into the decision.
During: Hawkish lean supports GBP; dovish lean pressures it. The first 60-90s wick is rarely the move — wait for the next HTF close.
After: Press-conference colour confirms or cancels the tone read. A [Confirmed candle close] on 15M / 1H in tone direction validates continuation.

Confirms: Tone-vs-pricing match shows up in cross-pair flow; a [Confirmed candle close] on 15M / 1H in tone direction validates.

Cancels: Press conference contradicts the headline tone — read flips on the back half of the window.

HIGH IMPACT

Inflation reading — rate-path lever for USD and yields.

Forecast: 3.2% · Previous: 3.0%

Why this matters: Hotter-than-forecast readings historically tend to support USD and yields (rates expected to stay higher for longer), pressuring gold and risk indices. Cooler readings favour the reverse rotation.

Market impact: cause: USD inflation surprise vs forecast → expectation: rate-path repricing in the front end → market reaction: USD and yields move first → asset impact: US Dollar Index (DXY) direction sets gold and US-index reaction

Before: Market is positioning around the 3.2% consensus; USD pairs and yields are most sensitive.
During: First reaction may be a liquidity sweep. Above forecast supports USD / yields; below forecast pressures both.
After: A 5M / 15M [Confirmed candle close] in surprise direction validates continuation. Reassess only after that close.

Confirms: US Dollar Index (DXY) / yields lead; a [Confirmed candle close] on 5M / 15M in surprise direction validates.

Cancels: First reaction reverses inside 30M; pre-release reference area lost; directional read cancelled.

Non Farm Payrolls · 20:00 AWST · 12:00 UTC · USD

HIGH IMPACT

Scheduled USD release.

Forecast: 180k · Previous: 160k

Why this matters: Standard transmission: surprise → USD repositions → correlated risk follows on first HTF close.

Market impact: cause: surprise vs forecast → expectation: short-term rate-path repricing → market reaction: USD repositions in the front end → asset impact: USD pairs and correlated risk respond on the first close

Before: Market is positioning around the 180k consensus; USD pairs and yields are most sensitive.
During: First reaction may be a liquidity sweep. Above forecast supports USD / yields; below forecast pressures both.
After: A 5M / 15M [Confirmed candle close] in surprise direction validates continuation. Reassess only after that close.

Confirms: A [Confirmed candle close] on 5M / 15M in surprise direction validates continuation.

Cancels: First reaction reverses inside 30M; pre-release reference area lost; directional read cancelled.

HIGH

ECB Rate Decision · 20:00 AWST · 12:00 UTC · EUR

HIGH IMPACT

Central-bank tone — hawkish/dovish vs current pricing.

Why this matters: Tone vs current market pricing is the lever. Hawkish lean supports EUR; dovish lean pressures it. Surprises against current pricing historically produce outsized moves.

Market impact: cause: tone vs current market pricing → expectation: rate-path lean shifts → market reaction: EUR repositions on tone, not headline → asset impact: cross-pair flow and rate-sensitive assets follow

Before: Market is pricing the existing rate-path; positioning is light into the decision.
During: Hawkish lean supports EUR; dovish lean pressures it. The first 60-90s wick is rarely the move — wait for the next HTF close.
After: Press-conference colour confirms or cancels the tone read. A [Confirmed candle close] on 15M / 1H in tone direction validates continuation.

Confirms: Tone-vs-pricing match shows up in cross-pair flow; a [Confirmed candle close] on 15M / 1H in tone direction validates.

Cancels: Press conference contradicts the headline tone — read flips on the back half of the window.
