Dollars-first guidance for today:

- Position size — if your normal risk is \$500 on a \$10k account, reduce to ~\$300 (60%) for the next 6 hours.
- Exit-points — give the trade more room. Tight exits get hit before direction confirms.
- Marginal setups — skip them. Only act when the trigger breaks AND the next candle closes beyond it (the confirmed directional structure test).
- Do NOT chase already-extended moves. Wait for the structural test — the floor that was the ceiling.

[[Long ▲]]

(<https://www.notion.so/35f51e90f20c81ffa44dd50835013a6a>) — expecting price to keep moving up

CONVICTION

●●●●● 5/5 — Very High

Why Very High: trigger level broke + momentum increased + retest held + the broken level is now defended by buyers (all criteria met).

TRIGGER LEVEL

[[Trigger Level]]

(<https://www.notion.so/35f51e90f20c81ffa44dd50835013a6a>): **1.1064**

Why it matters: 1.1064 capped every push for multiple sessions.

It is now the ceiling that flipped into a floor — buyers/sellers treat it as Support.

EXPECTED DURATION

[[Expected Duration]]

WHERE TO ACT

● ENTRY zone **1.1064 – 1.1065**

What this means: price has pulled back into the tight band where buyers stepped in the last time the level was tested.

Required price behaviour: a 5-minute candle that opens inside the band AND closes above the band low (this is the confirmed directional structure test).

Action: BUY on that candle close — start with the position rule below (**~\$150** planned risk).

● **WATCH level **1.1063****

What this means: buyers are losing initial control. The first warning sign that the move is weakening.

💰 If price closes below **1.1063** on the 1H, the position is typically down 30–50% of planned risk (**~\$60** of the **~\$150** at risk).

Action: hold what you have, do NOT add more.

● **CAUTION zone 1.1063 – 1.1060**

What this means: the other side is in control inside this band.

Holding from here means fighting the structure — exit risk is now real, not theoretical.

💰 Position drawdown 50–80% of planned risk (**~\$98** of the **~\$150**).

Action: scratch the trade for a small loss now. Re-read at next scan.

● **[[Invalidation]]**(<https://www.notion.so/35f51e90f20c81ffa44dd50835013a6a>) **1.1059**

What this means: the bullish idea is OFF entirely.

💰 Full planned risk taken: **\$150** on the recommended size.

Action: exit ALL remaining size NOW. Do NOT re-enter — wait for a fresh structure on a later scan.

● **Next review 2026-05-13 12:15 UTC**

ATLAS re-reads every zone at the next scan.

💰 **DOLLAR RISK THIS TRADE — HALF SIZE FOR FRESH**

💰 **Standard plan: **\$300 risk on 1 lot EURUSD** (30-point exit on a 0.0030 move).**

💰 **Recommended for this card (FRESH · half size for FRESH): **~\$150**.**

💰 **If Market Mood drops to Quiet (1/5) you can scale up to full size after a clean re-read.**

💰 **Reward target on a clean follow-through: **~\$855** on the recommended size · **5.7R**.**

WHAT THIS MEANS

The path of least resistance is up while **1.1059** holds. Buying the dip into the tight green entry band is the trade you would take.

WHAT TO DO NOW

- ① Wait for a 5-min candle to open inside **1.1064 – 1.1065**.
- ② BUY that candle's close — **\$150 on the recommended size**.
- ③ Place the exit-point at **1.1059** (**\$150 risk**).
- ④ If **1.1063** closes below on 1H, exit half (freeing **~\$75**) and hold the rest with the exit-point unchanged.
- ⑤ Full exit at **1.1059** if reached — the bullish idea is OFF.

WHAT CONFIRMS THE IDEA

A 5m close above ****1.1065**** after pulling back into the entry band — the confirmed directional structure test (price test) failed AND the trigger AND the next candle holds beyond it).

WHAT CANCELS THE IDEA

A 1H close below ****1.1059****. At that point the ceiling-to-floor flip has failed and the move is rolled over.

WHERE TO ACT

● **ENTRY zone **920.43 – 920.69****

What this means: price has pulled back into the tight band where buyers stepped in the last time the level was tested.

Required price behaviour: a 5-minute candle that opens inside the band AND closes above the band low (this is the confirmed directional structure test).

Action: BUY on that candle close — start with the position rule below (**~\$465** planned risk).

● **WATCH level **920.03****

What this means: buyers are losing initial control. The first warning sign that the move is weakening.

\$ If price closes below **920.03** on the 1H, the position is typically down 30–50% of planned risk (**~\$186** of the **~\$465** at risk).

Action: hold what you have, do NOT add more.

● **CAUTION zone 920.03 – 919.06**

What this means: the other side is in control inside this band.

Holding from here means fighting the structure — exit risk is now real, not theoretical.

\$ Position drawdown 50–80% of planned risk (**~\$302** of the **~\$465**).

Action: scratch the trade for a small loss now. Re-read at next scan.

● **[[Invalidation]]**(<https://www.notion.so/35f51e90f20c81ffa44dd50835013a6a>) **918.80**

\$ **DOLLAR RISK THIS TRADE — QUARTER SIZE ONLY (FADING)**

\$ **Standard plan: **\$1,860 risk on 100 shares NVDA** (\$18.60/share × 100 shares).**

\$ **Recommended for this card (FADING · quarter size for FADING): **~\$465**.**

\$ **Reward target on a clean follow-through: **~\$605** on the recommended size · **1.3R**.**

⚠️ Reward-to-risk is below 2R — only take this card if no FRESH or STILL ACTIVE setups are available.

WHAT THIS MEANS

The path of least resistance is up while **918.80** holds. Buying the dip into the tight green entry band is the trade you would take.

WHAT TO DO NOW

- ① QUARTER size at most — this is not a primary entry. **\$465 risk**.
- ② Only buy a clean pullback into **920.43 – 920.69** that prints a strong defensive 5-min close.
- ③ Place the exit-point at **918.80** (**\$465 risk**).
- ④ If **920.03** closes below on 1H, exit ALL — late-stage cards do not give second chances.
- ⑤ Skip this card entirely if the FRESH or STILL ACTIVE standouts above offer a cleaner setup today.

WHAT CONFIRMS THE IDEA

A 5m close above **920.69** after pulling back into the entry band — the confirmed directional structure test (price above the trigger AND the next candle holds beyond it).

WHAT CANCELS THE IDEA

A 1H close below **918.80**. At that point the ceiling-to-floor flip has failed and the move is rolled over.

⚠️ LATE-STAGE CAVEAT

Size quarter — the move is late. The reward is small. Skip if better setups exist.

 CHART REFERENCE – HOW TO READ THE FOUR ZONES

 Clean Bullish Breakout — Reference

Every Dark Horse candidate above is the same pattern in different markets. This is what it looks like on the chart, and what a trader actually does at each zone.

THE STORY

Price pushed through a level that had capped it for weeks (the old high). It came back to test the same level. Buyers stepped in to defend it. The ceiling has flipped into a floor.

HOW A TRADER ACTS (CONCRETE, DOLLARS-FIRST)

● BUY the pullback into the ****green ENTRY band**** — ONLY if the next 5-min candle opens inside the band AND closes above the band low.

● Place the exit-point just below the ****dashed red INVALIDATION line****. If price closes below it on the 1H, exit immediately.

💰 Dollar risk = (entry price – exit price) × position size × \$/point. Size the trade so this number ≤ 1% of your account (**\$100 on \$10k**, **\$250 on \$25k**, **\$1,000 on \$100k**).
